Were always sharing special offers, news about products, and stories about the crazy world of parenthood. These laws state what height, weight and age the child must be

to use different types of car seats. The biggest difference between provinces is the use of booster seats. 22c71bgl manual. Alberta, Saskatchewan, Manitoba, Yukon, Northwest Territories and Nunavut don't have any laws requiring children to use a booster seat. Let's start with some general info about car seats and some tips that apply to all seats. Please see this table for what is required in your province Some vehicles do not allow for the center position to borrow the anchors intended to be used by the outboard positions The ones that just go over the car seat are much safer. read about compression above I was thrilled when they approached me to work with them for Child Passenger Safety week. The winner will be contacted by email and will need to respond within 24 hours to claim the prize. This seat was chosen by Young Drivers as the seat to be given away to readers. Many of the people reading my blog have probably always known that it is illegal to ride in a vehicle without a seat belt. I've been using a seatbelt for so long, that it's instinctual to get in a car and put it on. A properly used child seat reduces a child's risk of injury in a crash by as much as 75 per cent, yet many child car seats are incorrectly used or improperly installed. I'm always open to questions about car seats, so please ask away.

The locking clamp of the adjuster may not rotate freely and the adjuster strap may pull through the adjuster in the lock direction. If the harness system loosens, the resulting slack may reduce the effectiveness of the restraint system in a motor vehicle collision. To date, there have been no reported injuries associated with this issue in Canada. By continuing, you are agreeing to our use of cookies. Learn More Only units produced on that day are affected. There have been no reported injuries. Use of the restraint system is not affected where installation instructions as stipulated on the English air bag warning label which includes a pictogram and in the bilingual instruction manual are followed. Dorel Distribution Canada is conducting a voluntary public notice on the following crib Safety 1st DropSide Crib model 10DV611BC Tiny Love Recalls Wind Chime Toys Due to Puncture and Laceration Hazards Dorel Distribution Canada in cooperation with Transport Canada is conducting a Public Notice of the MaxiCosi Mico Infant car seat and base, manufactured from Mar 8, 2008 to June 28, 2008. If that were true expiration dates would be shrinking! Expiry dates on products new and old can be found here. It won't magically break on March 31, 2018, but plastic does have a limited amount of time before it starts to become brittle and over time like that, parents tend to not care for the harness as it should be. It would be a good time to start looking for its replacement. Yes, I'm sure. I LOVED the 6 year rule. It meant I had a good excuse to get new seats over the years for the kids. We just had another Dorel seat hit 6 years. Away it went. These are the rules you must follow to restrain your children safely. All opinions at CarseatBlog are those of the individual author for informational purposes only, and do not necessarily reflect any policy or position of Carseat Media LLC. All information is provided on an as-is basis for readers in the USA and Canada. It's a whole new ride.

It's a whole new ride. Please turn it on so that you can experience the full capabilities of this site. The Nurture Infant Car Seat features an ergonomically shaped handle for a more comfortable carry and an extended pivoting canopy to protect your baby. This seat can be used rearfacing only for children weighing 5-22 lbs. This seat may be used with or without a base. The Nurture is designed for rearfacing usage and can be used with or without a convenience base that allows for easy transfer from home to car. This seat may be used with or without a base. Consult your vehicle owner's manual to determine proper placement of child restraint in your vehicle and familiarize yourself with your vehicle's components. Do not use abrasive cleaners or solvents. Allow harness to air dry. Tumble dry 10 to 15 minutes on low heat. Place the buckle in a cup of warm water and gently agitate the buckle back and forth. Press the red button several times while the buckle is in the water. Do not submerge the harness strap. To avoid damage to the buckle, do not clean the buckle with soap or detergents and do not use a lubricant. This seat can be used rearfacing only for children weighing 5-22 lbs. This seat may be used with or without a base. The Nurture Infant Car Seat features an ergonomically shaped handle for a more comfortable carry and a pivoting canopy,

to shade your baby. This seat may be used with or without a base. This new riding experience provides extended use by accommodating 1 or 2 kids up to 5 years old. The Pivot Xplore easily transforms from a stroller to a wagon by flipping the handle. This gives parents the ability to push as a stroller, or pull as a wagon. Pile all your stuff in and ride on out. Each seat holds a child up to 55 lbs., 120 lbs. total with storage. Unique slide and lock system expands frame to accommodate a second toddler or infant seat Infants and children can sit at various heights, upright or reclined, in both parentfacing and forwardfacing modes.

Toddler seat holds up to 55 lbs for extended use. Each year thousands of young children are killed or injured in car crashes. You can help keep this from happening to your child by using car safety seats and seat belts correctly on every single trip you take. Here are some helpful tips. When shopping for a car safety seat, keep the following in mind Don't decide by price alone. A higher price does not mean the seat is safer or easier to use. All car safety seats available for sale in the United States must meet government safety standards. When you find a seat you like, try it out. Put your child in it and adjust the harnesses and buckles. Make sure it fits properly and securely in your car. Keep in mind that pictures or displays of car safety seats may not show them being used the right way. Start with your baby's first ride home from the hospital. Never place a child in a rearfacing car safety seat in the front seat of a vehicle that has a passenger air bag. All children younger than 13 years are safest in the back seat. Be a good role model—always wear your seat belt. This will help your child form a lifelong habit of buckling up. Remember that each car safety seat is different. Read and keep the instructions that came with your seat handy, and follow them at all times. Read your car owner's manual for information about installing your car safety seat. If you need help installing your car safety seat, contact a certified Child Passenger Safety CPS Technician. That means that if your baby reaches 20 pounds before her first birthday, she should remain rearfacing at least until she turns 1 year old. It is best for children to ride rearfacing to the highest weight or height allowed by the manufacturer. There are 2 types of rearfacing seats infantonly seats and convertible seats. Convertible seats can be used rearfacing for infants, and then turned forwardfacing once your child is old enough and big enough to do so safely. Have a builtin harness.

Are used for infants from birth up to 22 to 30 pounds, depending on model. Many come with a base that can be left in the car. The seat clicks into and out of the base, so you don't have to install the base each time you use it. It is best for children to ride rearfacing to the highest weight or height allowed by the manufacturer, usually 30 pounds or more for all new convertible seats. Check your car safety seat instructions to find the weight and height limits for rearfacing. Have higher rearfacing weight limits than infantonly seats and are good for bigger babies. Have the following 3 types of harnesses Tshield—A padded tshaped or triangleshaped shield attached to the shoulder straps. 5point harness —5 points of attachment 2 at the shoulders, 2 at the hips, 1 at the crotch. Overhead shield —A padded traylike shield that swings down over the child. The harness should be in the slots at or below your baby's shoulders when your baby is rearfacing. Adjustable buckles and shields. Many rearfacing seats have 2 or more buckle positions for growing babies. Many overhead shields can be adjusted as well. Other helpful features. Angle indicators and builtin angle adjusters can help you get the proper recline. Head support systems can help your baby fit in the seat properly. However, it is best for him to ride rearfacing until he reaches the highest weight or height allowed by the car safety seat. However, it is best for him to ride rearfacing until he reaches the highest weight or height allowed by the car safety seat. To switch the seat from rear to forwardfacing, be sure to follow these steps Move the shoulder straps to the slots that are at or above your child's shoulders. On many convertible seats, the top harness slots must be used when the seat is in the forwardfacing position. Check the instructions to be sure. Move the seat from the reclined to the upright position if required by the manufacturer of the seat.

Make sure the seat belt runs through the forwardfacing belt path. When making these changes,

always follow the car safety seat instructions. Weight and height limits vary. Read your vehicle owner's manual or contact the manufacturer for details about how to use these seats. These seats come with harness straps for children who weigh up to 40 to 65 pounds depending on the model. Once your child reaches the weight or height limit for the harness, you can use the seat as a booster by removing the harness and using your vehicle's lap and shoulder seat belts. Keep in mind that when using the harness straps, the seat can be secured with a lap and shoulder belt or a laponly belt. However, once you remove the harness, you must use a lap and shoulder seat belt. Children must never ride in a booster seat using a lap belt only because serious injury can result. This means the lap belt lies low across your child's upper thighs and the shoulder belt crosses the middle of your child's chest and shoulder. Correct belt fit helps protect the stomach, spine, and head from injury in a crash. Both highback and backless booster seats are available. They do not come with harness straps but are used with the lap and shoulder seat belts in your vehicle, the same way an adult rides. Booster seats should be used until your child can correctly fit in lap and shoulder seat belts see "Seat belts" below. Your child should stay in a car safety seat with a harness as long as possible before switching to a booster seat. You can tell when your child is ready for a booster seat when one of the following is true She reaches the top weight or height allowed for her seat with a harness. These limits are listed on the seat and are also included in the instruction booklet. Her shoulders are above the harness slots. Her ears have reached the top of the seat. If the seat belt does not fit your child correctly, he should stay in a booster seat until the adult seat belts fit him correctly.

This is usually when the child reaches about 4 9 in height and is between 8 and 12 years of age. Your child is ready to use a lap and shoulder seat belt when the belts fit properly. This means The shoulder belt lies across the middle of the chest and shoulder, not the neck or throat. The lap belt is low and snug across the upper thighs, not the stomach. He is tall enough to sit against the vehicle seat back with his legs bent without slouching and can stay in this position comfortably throughout the trip. Other points to keep in mind when using seat belts Make sure your child does not tuck the shoulder belt under her arm or behind her back. If there's only a lap belt, make sure it's snug and low on her thighs, not across the stomach. Try to get a lap and shoulder belt installed in your car by a dealer. Never allow anyone to "share" seat belts. All passengers must have their own car safety seats or seat belts. The safest place for all children younger than 13 years to ride is in the back seat. These products may actually interfere with proper lap and shoulder belt fit by causing the lap belt to ride too high on the stomach and making the shoulder belt too loose, and may even damage the seat belt itself. There is no federal standard for the performance of these products, and most vehicle and car safety seat manufacturers do not recommend their use. Until there are federal safety standards for these products, the American Academy of Pediatrics AAP recommends they not be used. As long as children are riding in the correct restraint for their size and age, they do not need to use any additional devices. The seat must be buckled tightly into your vehicle. Your child must be buckled snugly into the seat. Ask yourself the following questions to make sure both are done correctly. If you are not sure, check the instructions that came with your car safety seat, or contact a certified CPS Technician for help. Is the seat belt routed through the correct belt path.

If you are using the LATCH system see "Installation made safer and easier" for more information to attach the seat, have you attached the straps to the correct anchor points in the vehicle. Are the LATCH straps or seat belt buckled tightly. If you can move the seat more than an inch side to side or front to back, it's not tight enough. Is your rearfacing seat reclined enough. Your infant's head should not flop forward. If it does, tilt the car safety seat back a little. Your car safety seat may have a builtin recline adjuster for this purpose. If not, wedge firm padding, such as a rolled towel, under the base. Do you need a locking clip. They come with all new car safety seats, and some are even built into the seat. If the seat belts in your car move freely even when buckled and there is no way to lock them, you need a locking clip. If you're not sure, check the manual that came with your car. Locking clips are not needed in most newer vehicles and in vehicles with LATCH see "Installation

made safer and easier" for more information Some lap belts especially those found in older vehicles need a special heavyduty locking clip. These are only available from the vehicle manufacturer. Check the manual that came with your car for more information or visit a car safety seat inspection station. Are the harnesses snug. Have you placed the plastic harness clip if your seat comes with one at armpit level to hold the shoulder straps in place. Do the harness straps lie flat. Is your baby dressed in clothes that allow the straps to go between the legs. It's OK to adjust the straps to allow for thicker clothes, but make sure the harness still holds the child snugly. Also, remember to tighten the straps again after the thicker clothes are no longer needed. Is anything under your baby. Tuck blankets around your baby after adjusting the harness straps snugly. Never place them under or behind your baby. Is your child slouching down or to the side.

If so, pad the sides of the seat and between the crotch and the crotch strap with rolled up diapers or blankets. Vehicles have at least 2 sets of small bars, called anchors, located in the back seat where the cushions meet. Car safety seats that come with LATCH have a set of attachments that fasten to these anchors. Nearly all passenger vehicles and all car safety seats made on or after September 1, 2002, come with LATCH. However, unless both your vehicle and the car safety seat have this anchor system, you will still need to use seat belts to install the car safety seat. A tether is a strap that attaches to the top of a car safety seat and to an anchor located on the rear window ledge, on the back of the vehicle seat, or on the floor or ceiling of the vehicle. Tethers give extra protection by keeping the car safety seat and the child's head from moving too far forward in a crash or sudden stop. Tethers are part of the LATCH attachment system, though they should not be confused with lower LATCH attachments; the tether is a longer strap at the top of the seat and the lower LATCH attachments are located at or near the base of the seat. Most new forwardfacing car safety seats and a few rearfacing car safety seats come with tethers. For older car safety seats, tether kits are available. Tethers are recommended because they greatly improve the protection of your child in a crash. Check with the car safety seat manufacturer to find out how you can get a tether for your seat if yours does not have one. Child Passenger Safety CPS Technicians can help you. If you have more questions about installing your car safety seat, find a certified CPS Technician. A list of certified CPS Technicians is available by state or ZIP code on the National Highway Traffic Safety Administration NHTSA Visit Their Website.These may seem safe, but thousands of children are hurt every year from falling out of shopping carts or from the carts tipping over.
